Lang Dental Announces the Introduction of Jet XR Radiopaque Acrylic

Wheeling, IL — Dave Lang, President of Lang Dental Manufacturing Co, Wheeling, IL, announced today that the company is pleased to introduce Jet XR Radiopaque Acrylic designed to offer better clinical diagnostics where a radiopaque acrylic would be useful.

Jet XR offers lab technicians a homogenous pre-mixed, self-curing acrylic with barium sulfate. Past practice has required the technician to mix in a radiopaque agent at the bench which often lead to inconsistency in the mix which could result in inadequate clinical diagnostics.

Useful in identifying implant sites by the clinician, Jet XR can be fabricated easily and quickly into a provisional implant stent for clinical diagnostic radiographs.

Jet XR is available in two opacities, opaque and shadow.

Lang Dental is committed to the advancement of clinical dentistry through the development and distribution of quality dental materials. Additional advancements are expected to be announced throughout 2011 and beyond.

Lang Dental Manufacturing, Co. was founded in 1929 by Samuel Lang providing dental materials of the day to dental professionals. Since 1958, Lang Dental developed, manufactured and distributed to dental professionals globally, trusted acrylics used to fabricate tooth-colored self-curing acrylics, denture base acrylics and supporting equipment. Jet and Lang brand products are known for their excellence and consistent performance, trusted by clinicians and technicians worldwide.
