Trademark Change

Wheeling, IL – Lang Dental Manufacturing Co. today announced a trade name change on its recently introduced product Mach 4 fast setting provisional acrylic.

Due to a similarity in trade mark to another dental material already on the market, Lang agreed to make this change effective immediately.

The new trademark, Jet Set-4 accurately describes the faster setting Jet tooth shade acrylic designed to meet the needs of today's dental practice. With a 4 minute final set time, Jet Set-4 improves chairtime efficiency while providing the outstanding physical properties of a methyl methacrylate system...and it does it at 1/10th the cost of cartridge delivered bis-acryls.

Recent articles indicate that there are times and places for the broad array of dental materials in the dental practice...that includes dental acrylics. Now the practice has another option in provisional acrylics with faster curing time that provides great marginal integrity, strength and durability. Jet Set-4 is available through popular dental distributors, worldwide.

Lang Dental Manufacturing, Co. was founded in 1929 by Samuel Lang providing dental materials of the day to dental professionals. Since 1958, Lang Dental developed, manufactured and distributed to dental professionals globally, trusted acrylics used to fabricate tooth-colored self-curing acrylics, denture base acrylics and supporting equipment. Jet and Lang brand products are known for their excellence and consistent performance, trusted by clinicians and technicians worldwide.
